1. Connect Wallet Flow

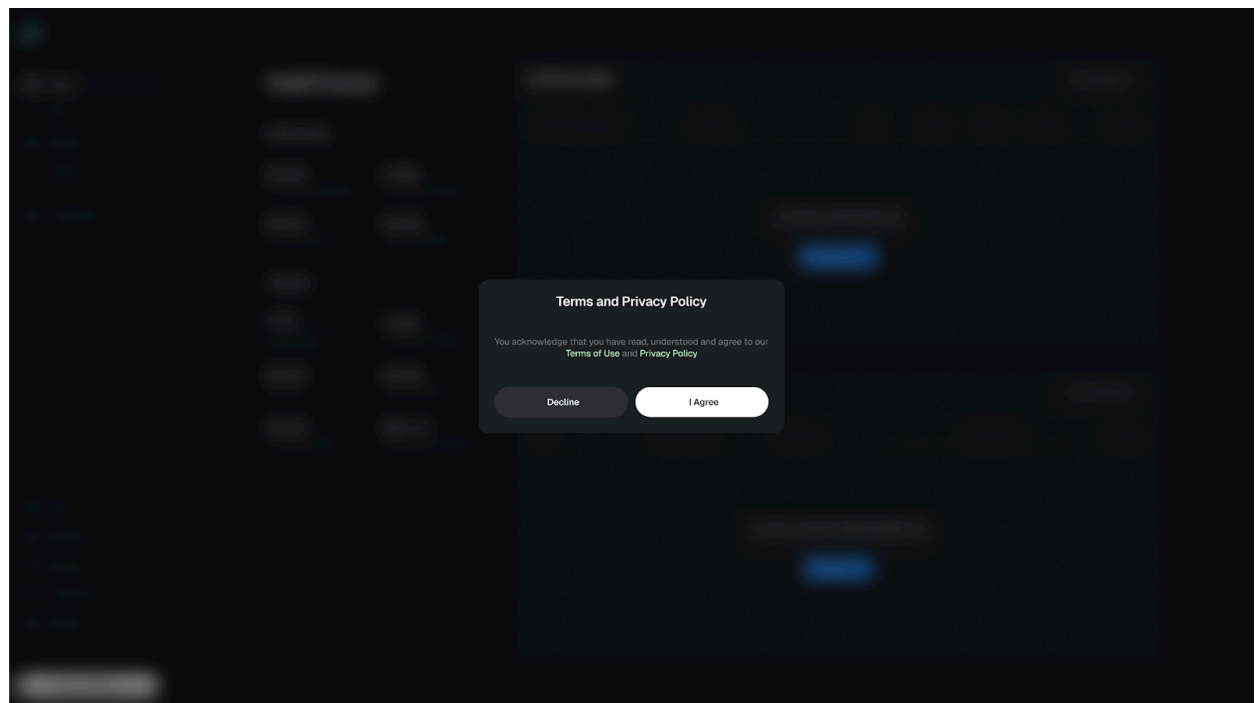

1. If a user enters the platform without a connected wallet, they cannot open positions. The “Connect Wallet” button is displayed.
2. To connect a wallet, the user clicks the “Connect Wallet” button and selects a wallet from the supported list.
3. If this is the user’s first time entering the platform, they must accept the Terms of Use and Privacy Policy before interacting with the platform.
4. After connecting, the wallet address appears in the interface, and the user can begin using the platform.

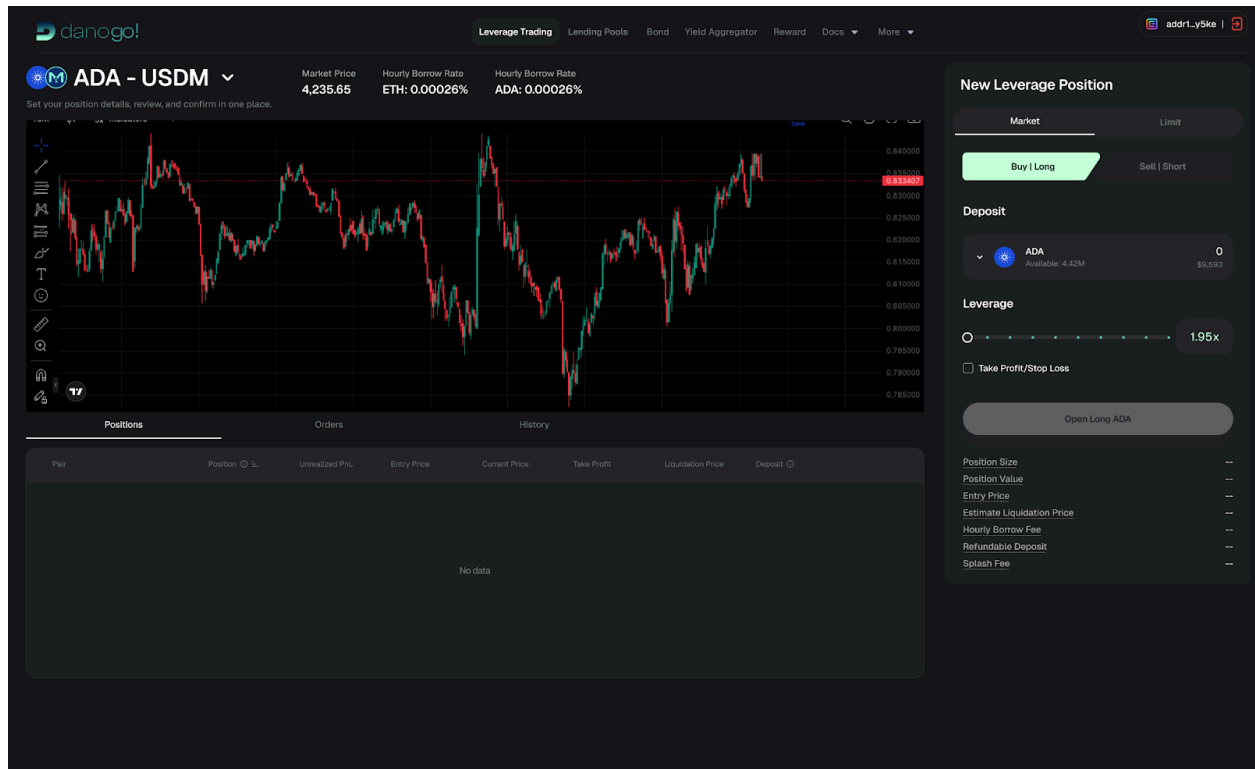

1. If a user enters the platform without a connected wallet, they cannot open positions. The "Connect Wallet" button is displayed.

2. To connect a wallet, the user clicks the "Connect Wallet" button and selects a wallet from the supported list.

3. If this is the user's first time entering the platform, they must accept the Terms of Use and Privacy Policy before interacting with the platform.

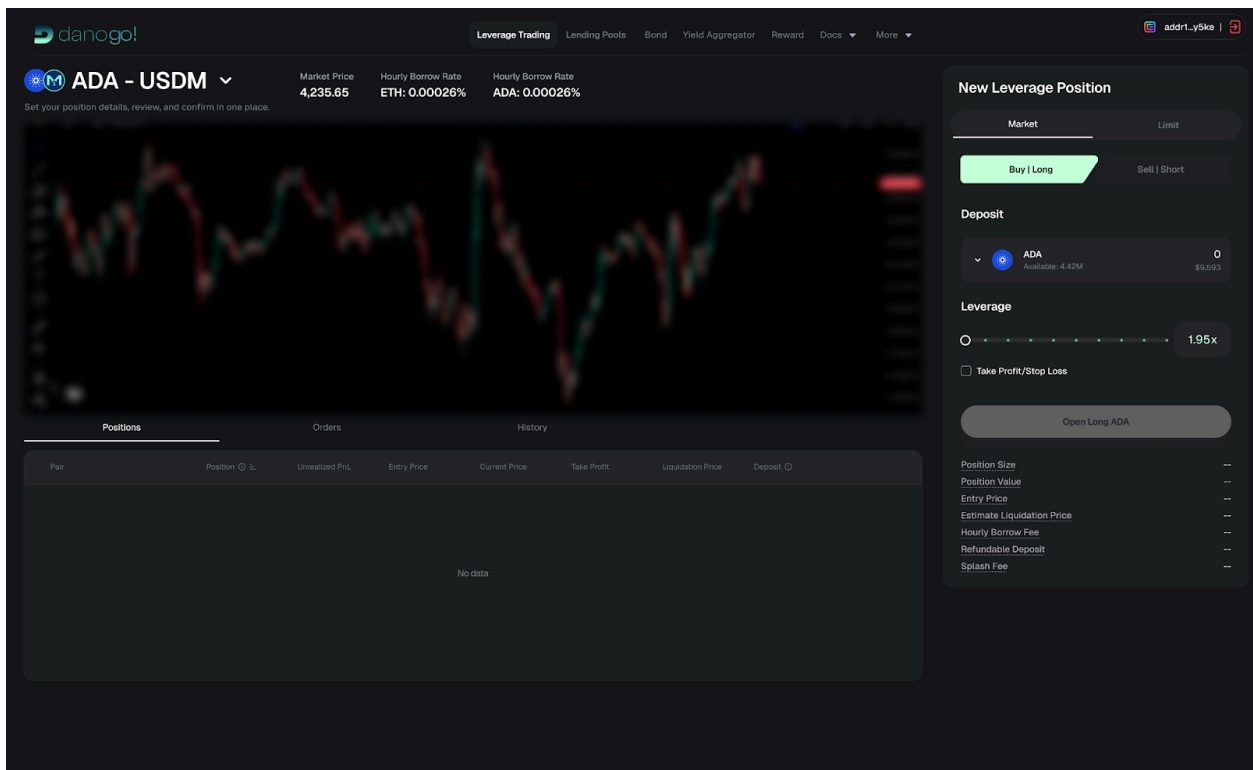

4. After connecting, the wallet address appears in the interface, and the user can begin using the platform.

2. Open Long Position_Market Order Flow

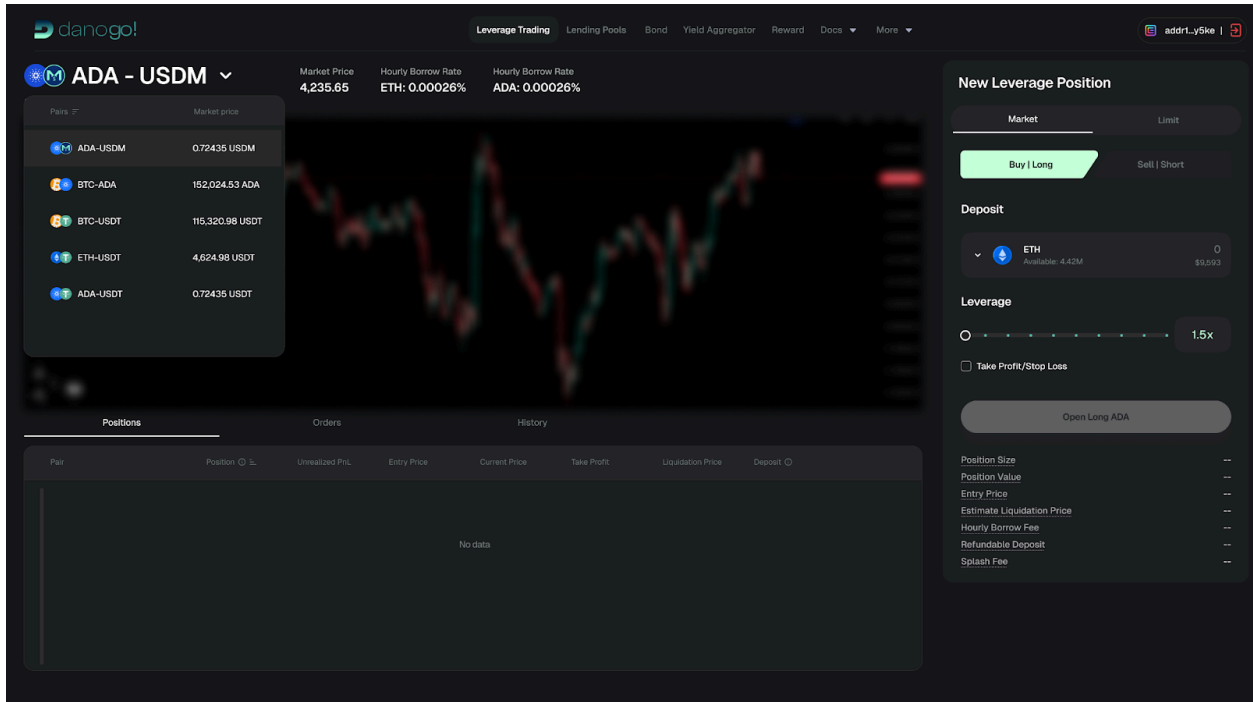

Open Long Position (Market Order)

1. After connecting your wallet, the wallet address is displayed and trading actions are enabled
2. Select Trading Pair:
 - Users choose a trading pair (e.g., ADA/USDM) from the pair selector.
 - The chart and market data update accordingly.
3. Choose Order Type:
 - Click “Market” to trading at current market price
 - or ‘Limit’ to set a specific price to open the position when conditions are met.
4. Choose Position Direction
 - Click “Buy / Long” to open a long position.
 - Click “Sell / Short” to open a short position.
5. Configure Position
 - Choose the deposit token from the supported list by clicking the dropdown icon next to the token symbol.
 - Enter the deposit amount and select your desired leverage.
6. Review the position details shown in the panel below:

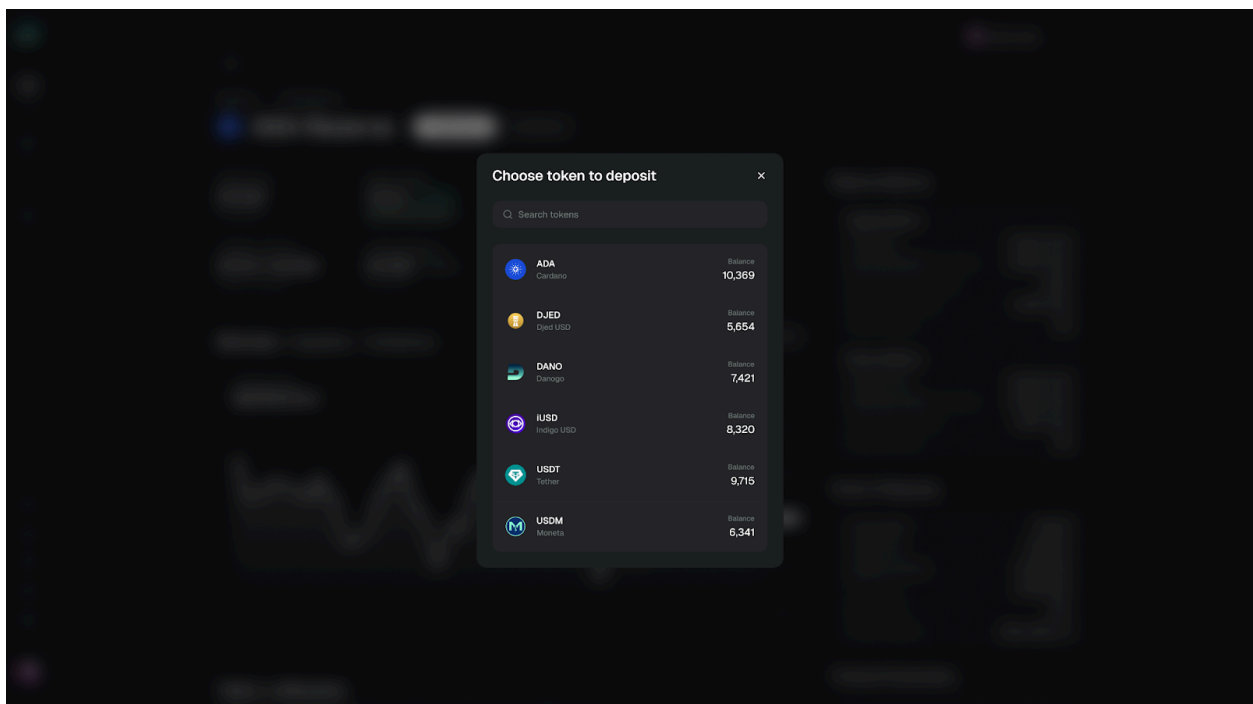

- The system displays calculated metrics:
 1. Position size
 2. Entry price
 3. Liquidation price
 4. Fees
 - If everything looks correct, click “Open Long ADA” (or the corresponding action button).
 1. Transaction is processed on-chain.
7. Once the transaction is successfully submitted, your new position will appear in the Positions tab.

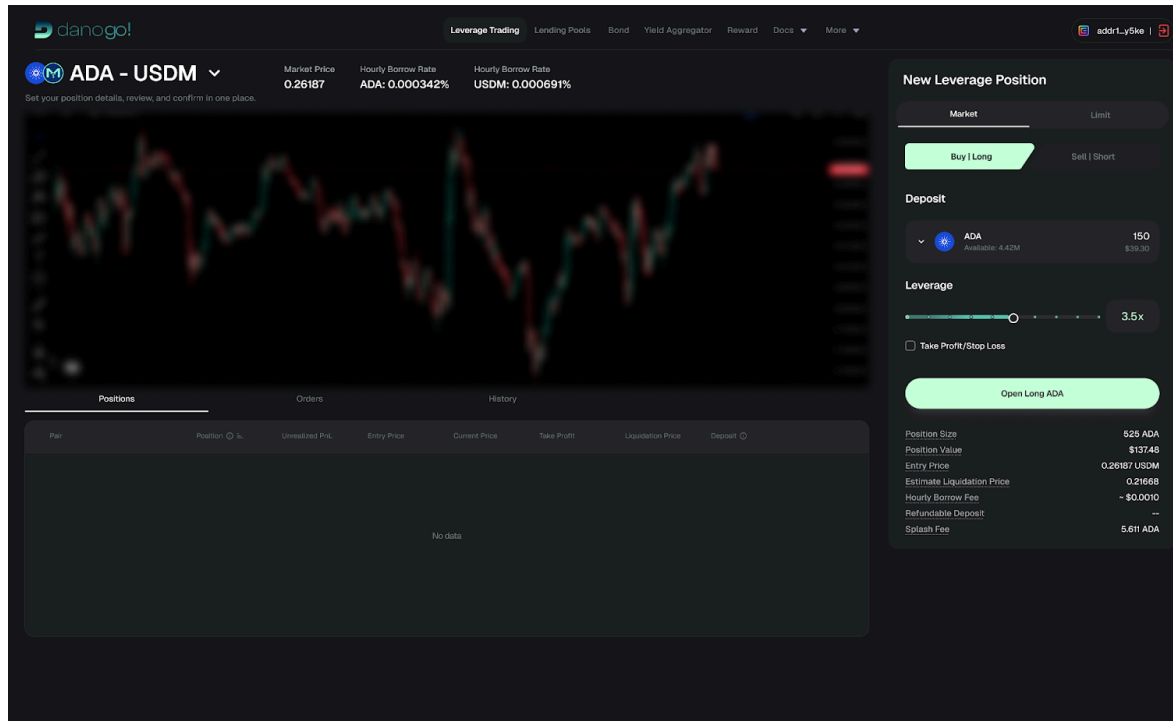

1. UI After connecting wallet: trading actions are enabled

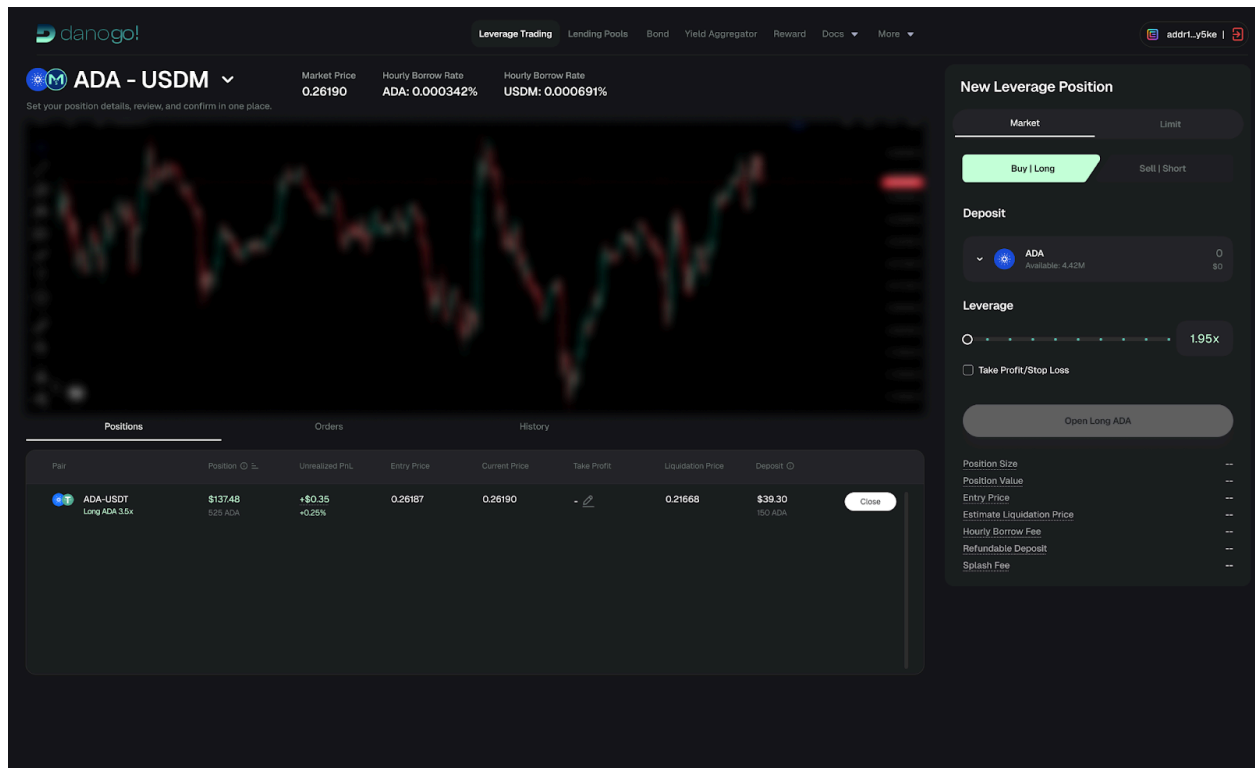

1. Select Trading Pair:
 - a. Users choose a trading pair (e.g., ADA/USDM) from the pair selector.
 - b. The chart and market data update accordingly.
2. Click "Buy|Long" to open Long position with chosen pair. to change deposit token, click the dropdown icon next to the token symbol.

4. On Popup "Choose Token" , Choose a deposit token which you want

4. Enter the deposit amount and select your desired leverage.
5. Review the position details shown in the panel below. If everything looks correct, click "Open Long ADA" (or the corresponding action button).

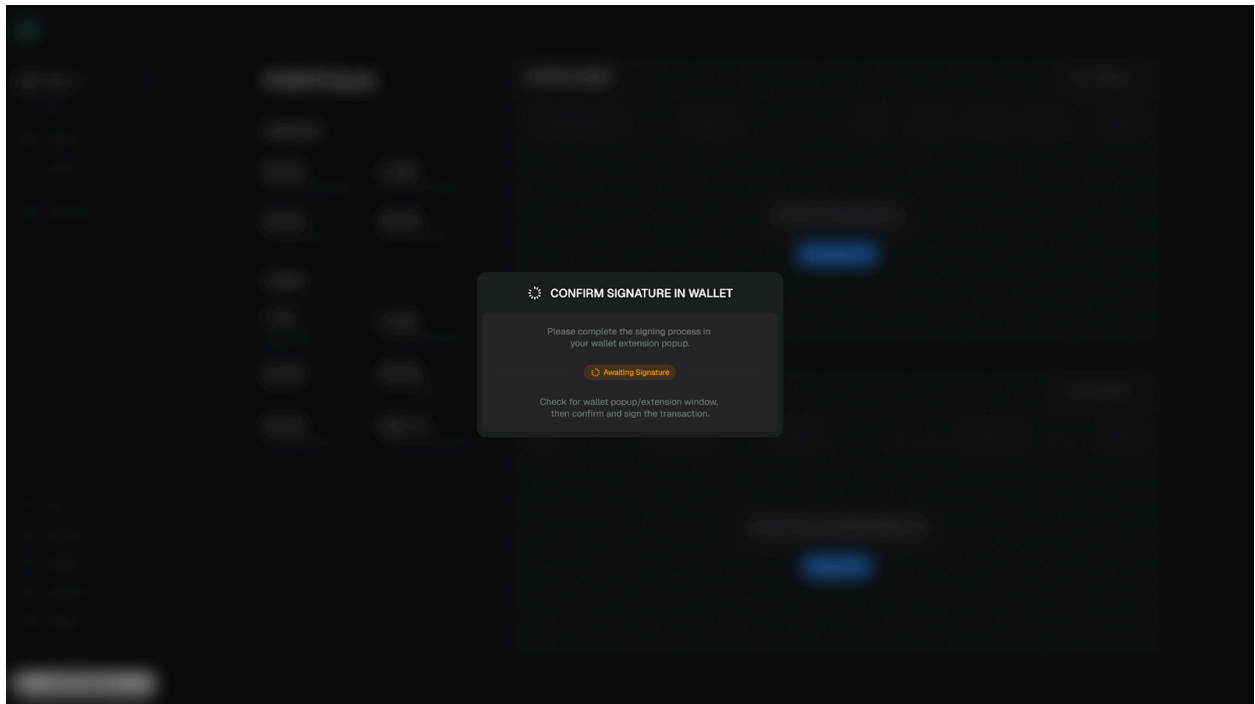

5. Once the transaction is successfully submitted, your new position will appear in the Positions tab.

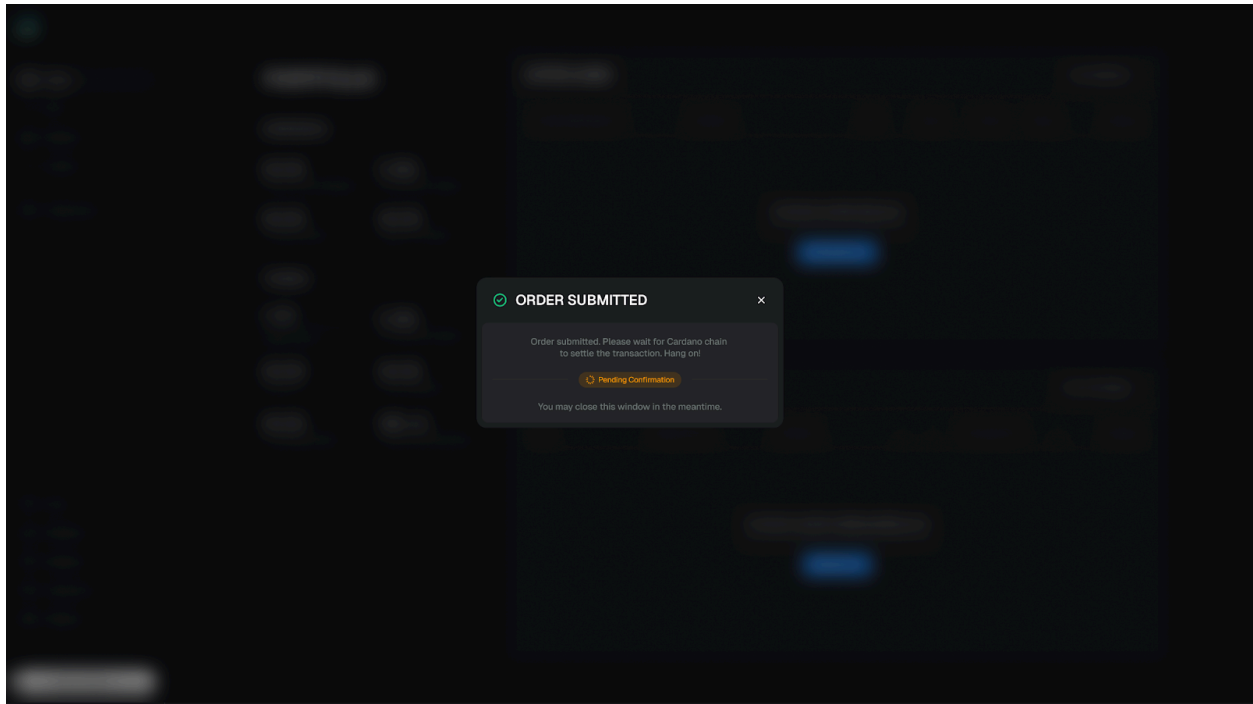

3. Transaction Processing Flow

Transaction Processing Flow

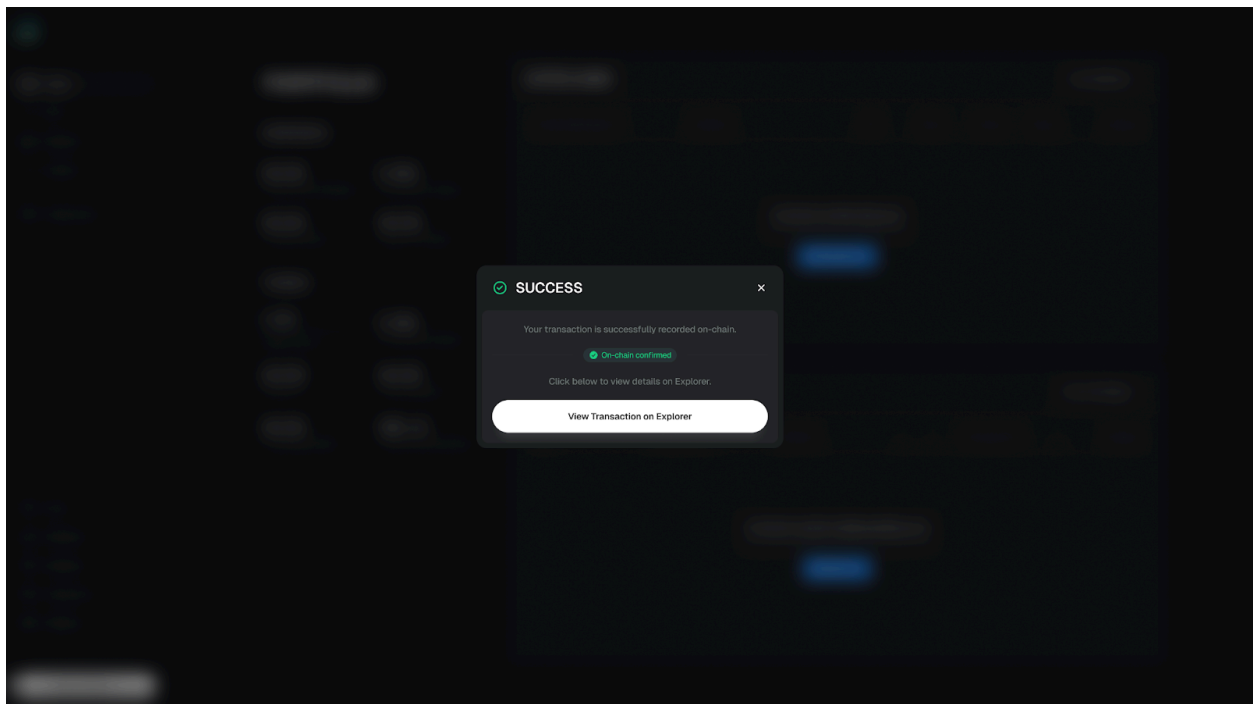

1. Confirm Signature in wallet
 - A processing pop-up is displayed while waiting for the user to review and sign the transaction in their wallet extension.
 - This state indicates that the system is awaiting user confirmation.
2. Transaction Submitted
 - After signing on the wallet extension, the transaction is submitted to the blockchain.
 - A processing pop-up is displayed to indicate that the transaction is being processed on-chain
3. Result Notification : Once the transaction is confirmed:
 - A success pop-up is shown if the transaction is completed successfully.
 - (Optional) An error pop-up is shown if the transaction fails.

1. A processing pop-up is displayed while waiting for the user to review and sign the transaction in their wallet extension.

2. A processing pop-up is displayed to indicate that the transaction is being processed on-chain

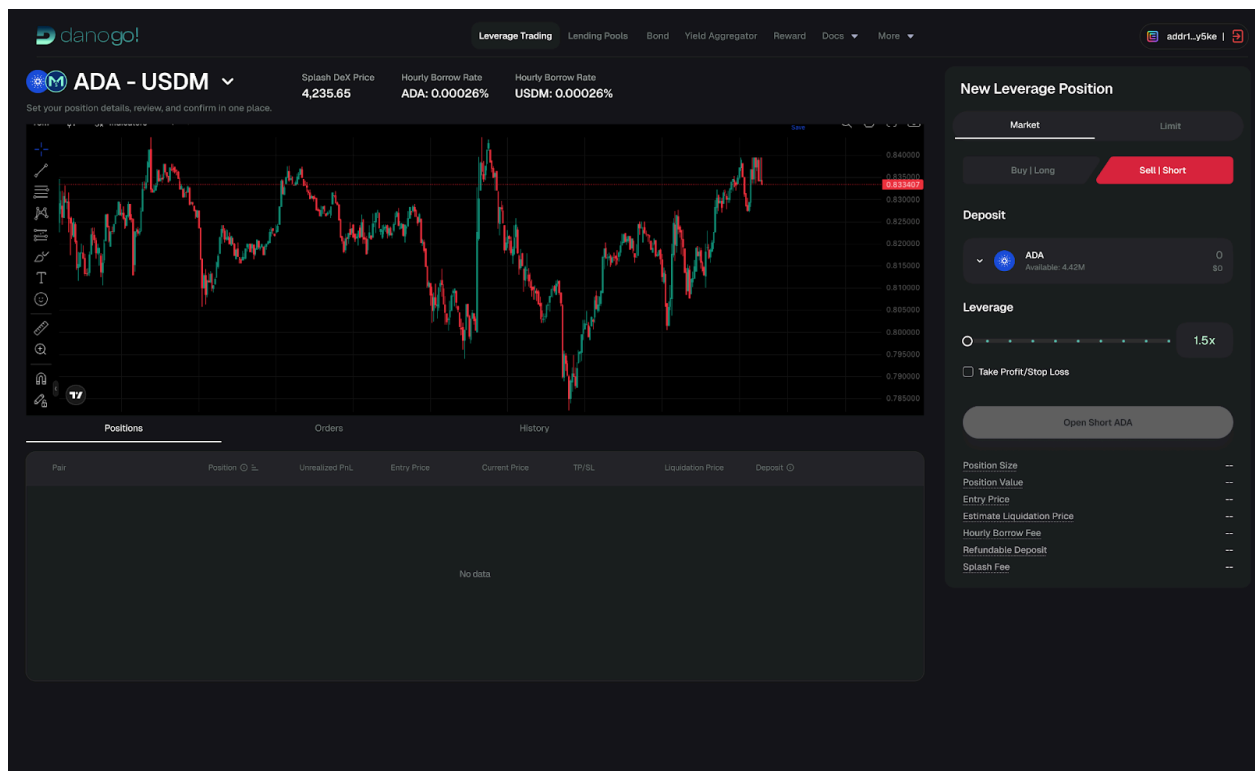

3. A success pop-up is shown if the transaction is completed successfully.

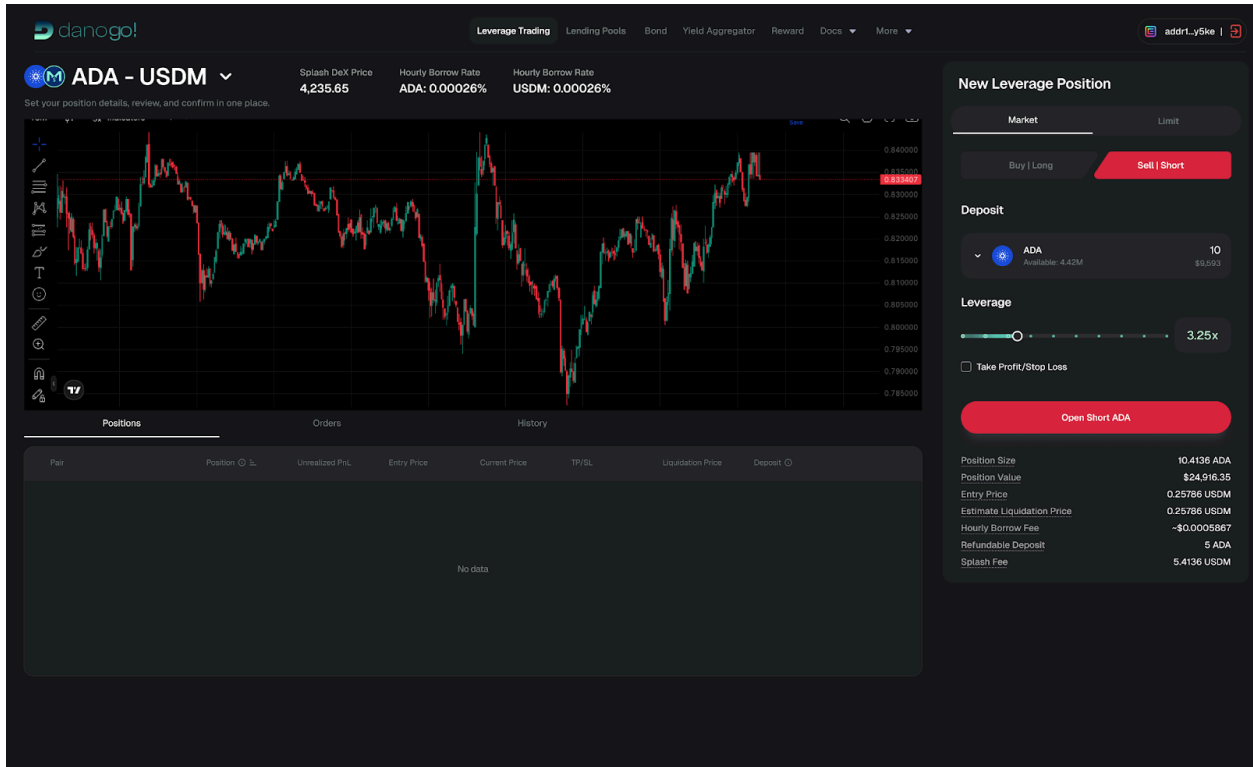

4. Open Short Position (Market Order) Flow

Open Short Position (Market Order)

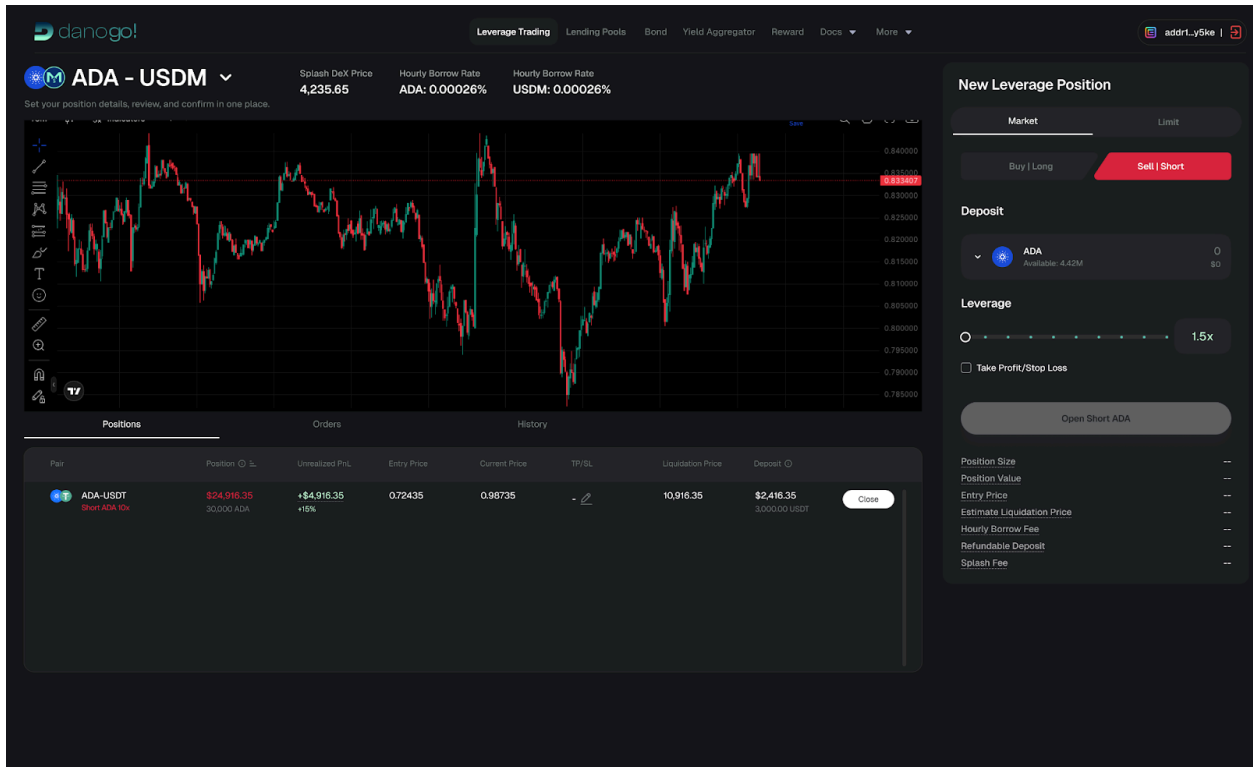

1. The flow for opening a Short position at market price follows the same steps as opening a Long position, with one key difference:
 - o Instead of selecting “Buy / Long”, the user selects “Sell / Short”.
2. All other steps remain the same:
 - o Select trading pair
 - o Choose Market Order
 - o Select deposit token, enter amount and leverage
 - o Review position details
 - o Submit transaction
3. The UI differences are as follows

1. After selecting the trading pair, go to the Short tab in the New Leverage Position section.

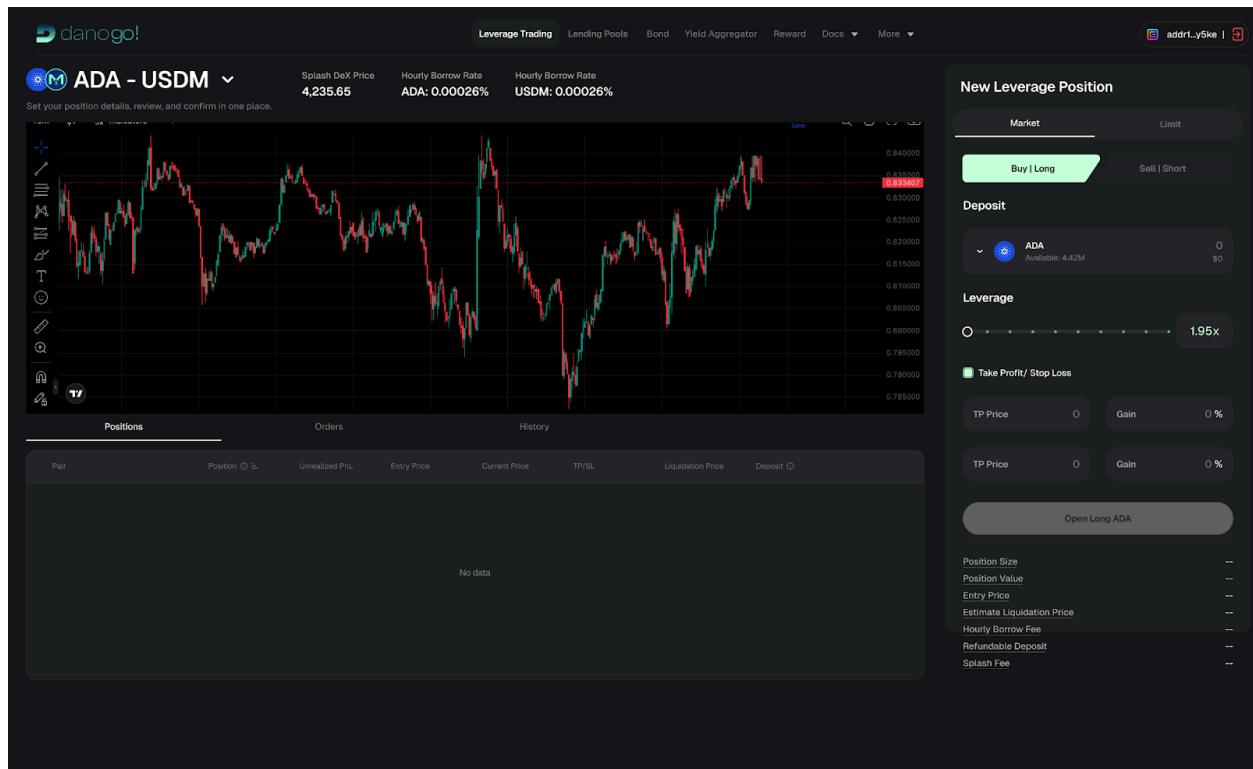

2. Choose the deposit token, enter the deposit amount, and set your desired leverage. Review the position details shown below. If everything looks correct, click “Open Short [Token]” to confirm, then sign the transaction

3. Once the transaction is completed, you can view your position in the Positions tab.

5. Open Long Position (Market Order with TP/SL) Flow

1. The flow for opening a Long position (market price) with Take Profit and Stop Loss follows the same steps as opening a Long position (market price), with additional TP/SL settings
 - Users can optionally set:
 - Take Profit price to automatically close the position when the target profit is reached
 - Stop Loss price to automatically close the position to limit losses
2. All other steps remain the same:
 - Select trading pair
 - Choose Market Order
 - Select “Buy / Long”
 - Select deposit token, enter amount and leverage
 - Review position details
 - Submit transaction
3. The UI differences are as follows

1. After selecting the trading pair, go to the Long tab in the New Leverage Position section. Checked on Take profit/ Stop Loss check box

3. Once the transaction is completed, you can view your position in the Positions tab, with TP/SL price can be edit

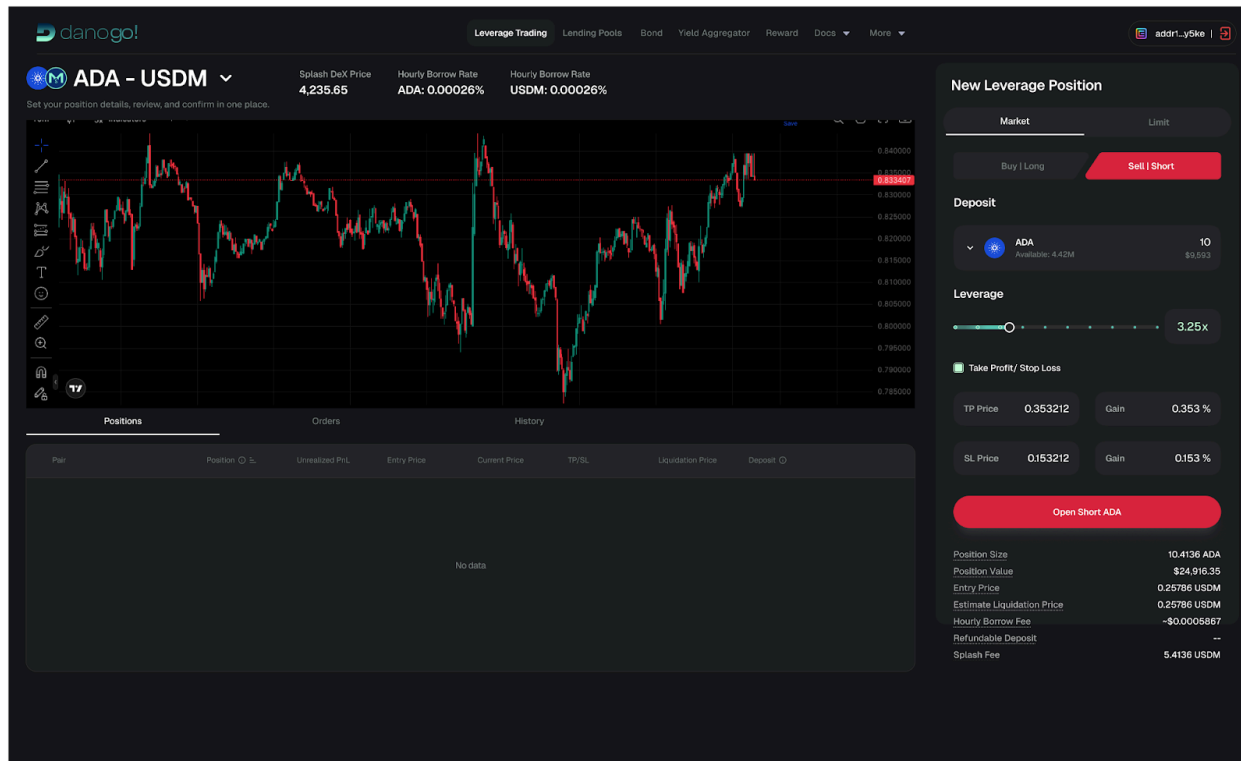

6. Open Short Position (Market Order with TP/SL) Flow

Open Short Position (Market Order with TP/SL)

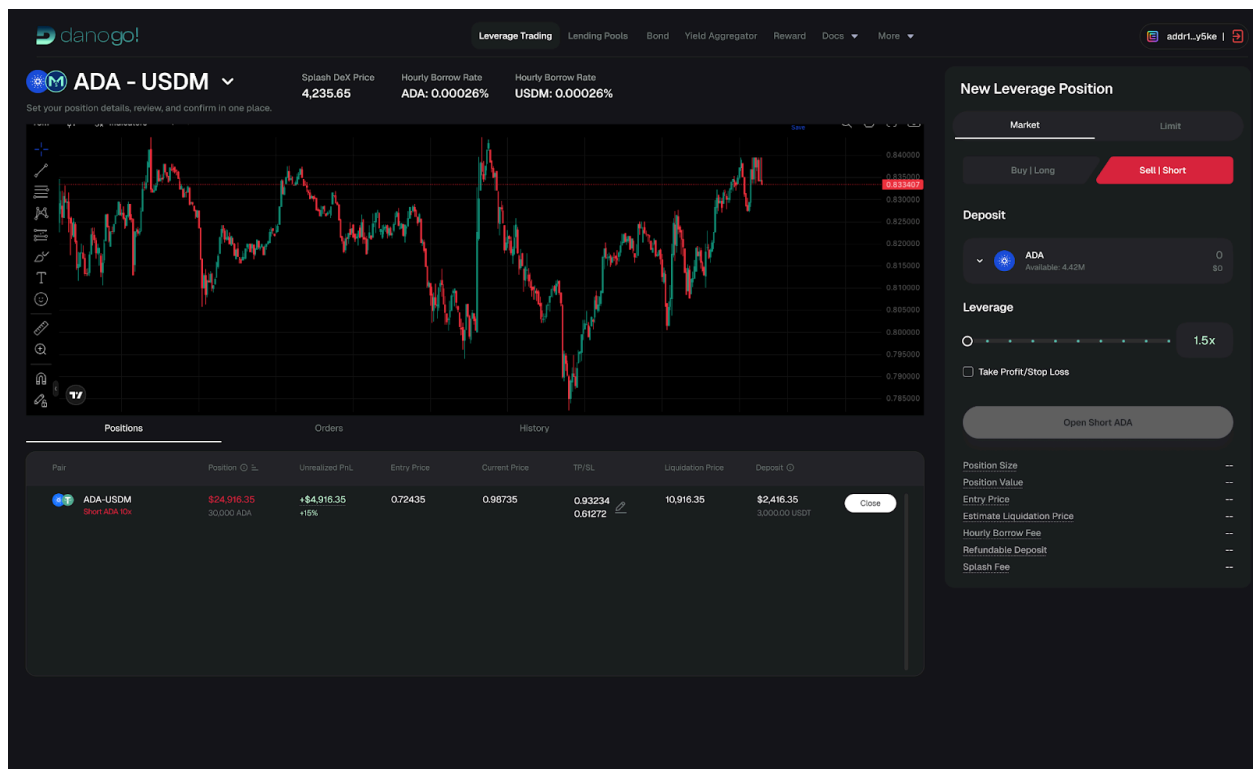

1. The flow for opening a Short position (market price) with Take Profit and Stop Loss follows the same steps as opening a Short position (market price), with additional TP/SL settings
 - Users can optionally set:
 - Take Profit price to automatically close the position when the target profit is reached
 - Stop Loss price to automatically close the position to limit losses
2. All other steps remain the same:
 - Select trading pair
 - Choose Market Order
 - Select “Buy / Long”
 - Select deposit token, enter amount and leverage
 - Review position details
 - Submit transaction
3. The UI differences are as follows

1. After selecting the trading pair, go to the Short tab in the New Leverage Position section. Checked on Take profit/ Stop Loss check box

2. Enter the deposit amount and set your desired leverage, then specify your Take Profit and Stop Loss prices. Review the position details shown below. If everything looks correct, click “Open Short” to proceed, and then sign the transaction

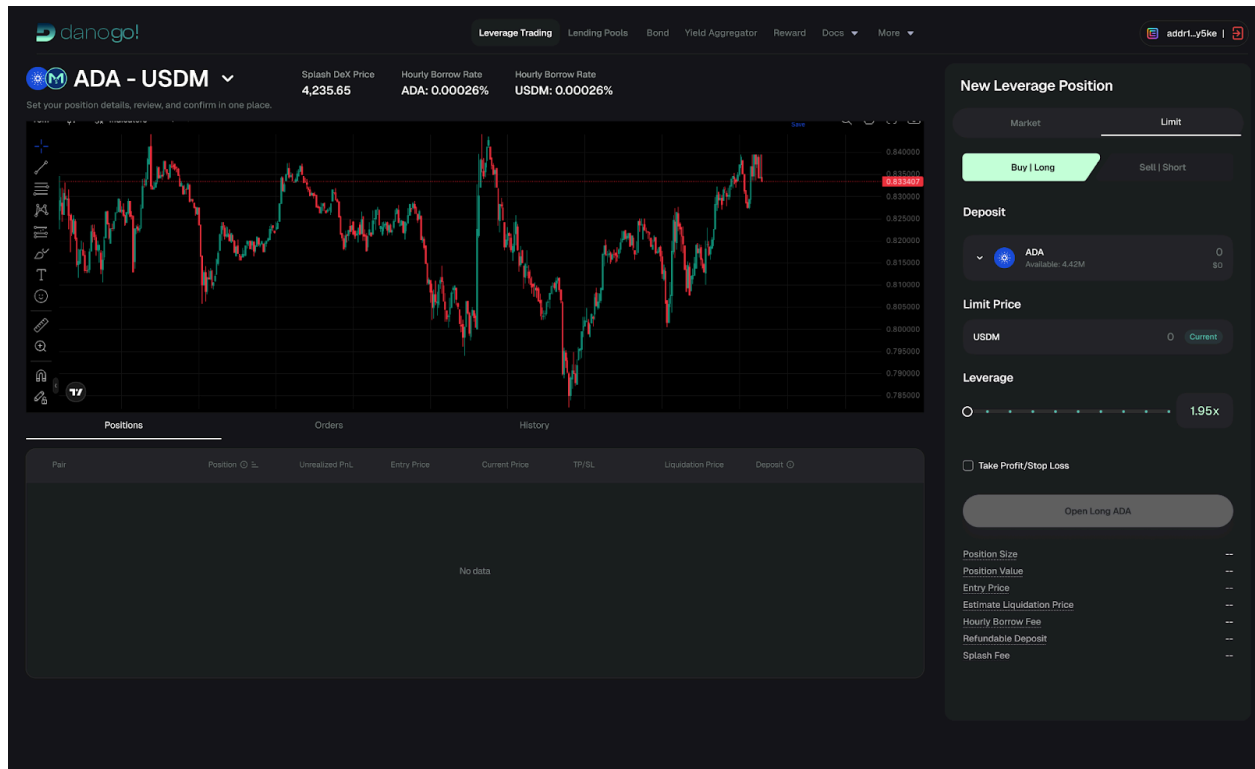

3. Once the transaction is completed, you can view your position in the Positions tab, with TP/SL price can be edit

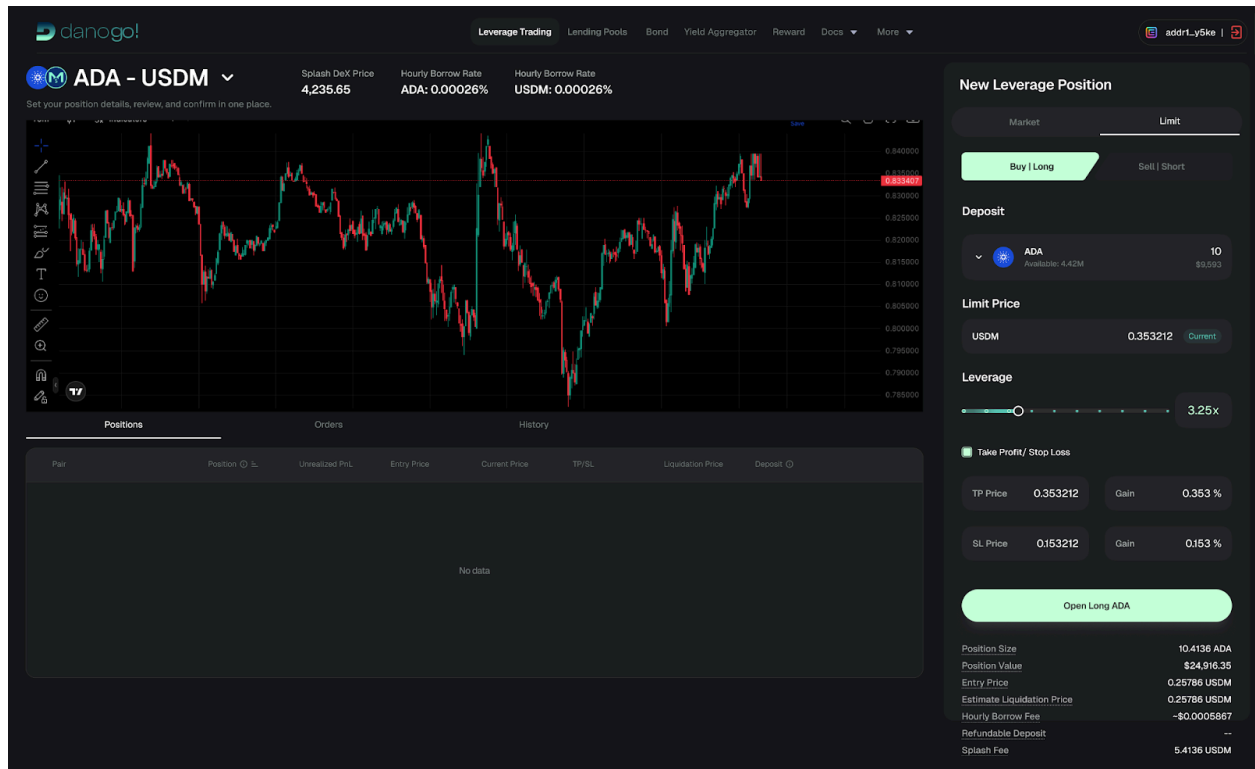

7. Open Long Position (Limit Order with TP/SL) Flow

Open Long Position (Limit Order with TP/SL)

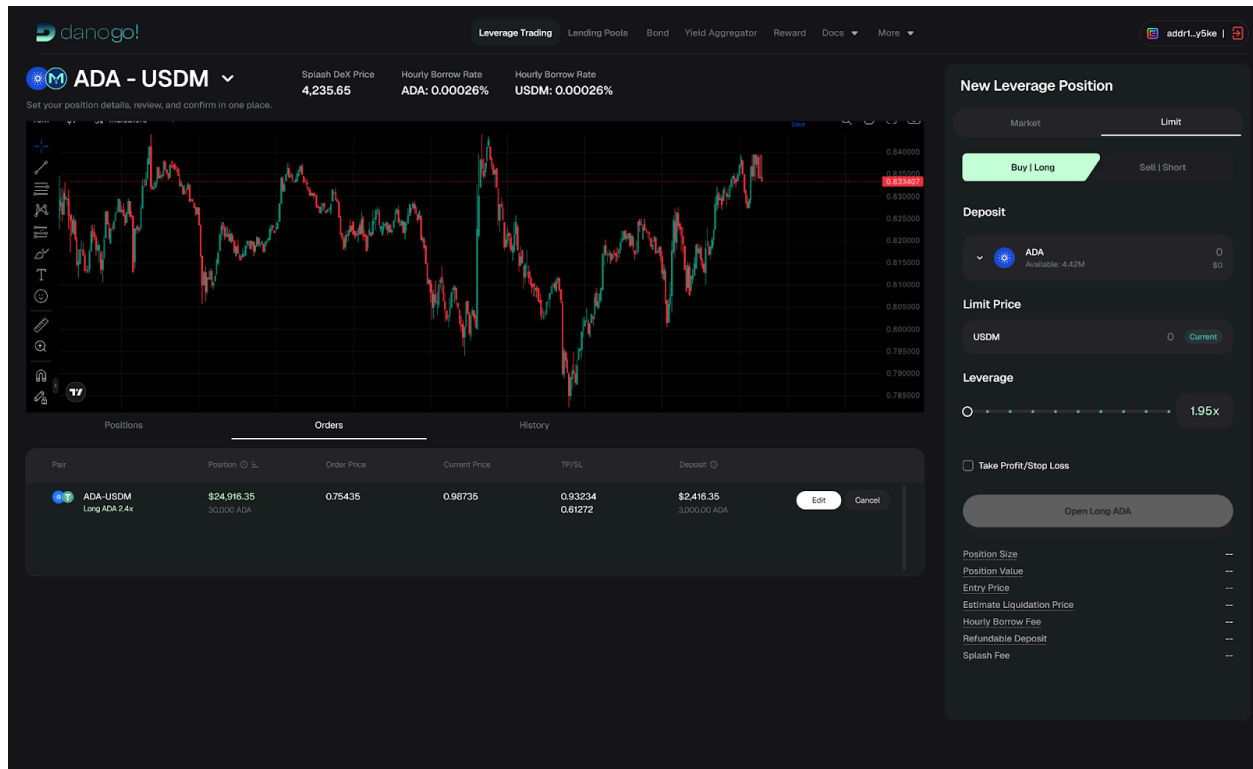

1. The flow for opening a Long position with a Limit Order follows the same steps as opening a Long position at market price, with key differences:
 - Instead of selecting “Market”, the user selects “Limit” and sets a desired execution price.
 - Additionally, users can optionally set Take Profit and Stop Loss conditions.
2. All other steps remain the same:
 - Select trading pair
 - Select “Buy / Long”
 - Select deposit token, enter amount and leverage
 - Review position details
 - Submit transaction
3. The UI differences are as follows:
 - Additional input fields for:
 - Limit Price
 - Take Profit price
 - Stop Loss price
 - The order is not executed immediately, but waits until the market reaches the specified limit price
 - The order is created as a Pending Order, and the position is only opened once the limit condition is met
 - TP/SL conditions are applied after the position is successfully opened
 - Users can monitor, update, or cancel the pending order before execution

1. After selecting the trading pair and choosing Limit as the order type, make sure you are on the Long tab in the New Leverage Position section.

2. Enter your deposit amount and set your desired leverage.
3. **Then, specify your limit price—the price at which you want to open the position.**
4. User can also set your Take Profit and Stop Loss prices.
5. Review the position details shown below. If everything looks correct, click “Open Long” to place the limit order, then sign the transaction.

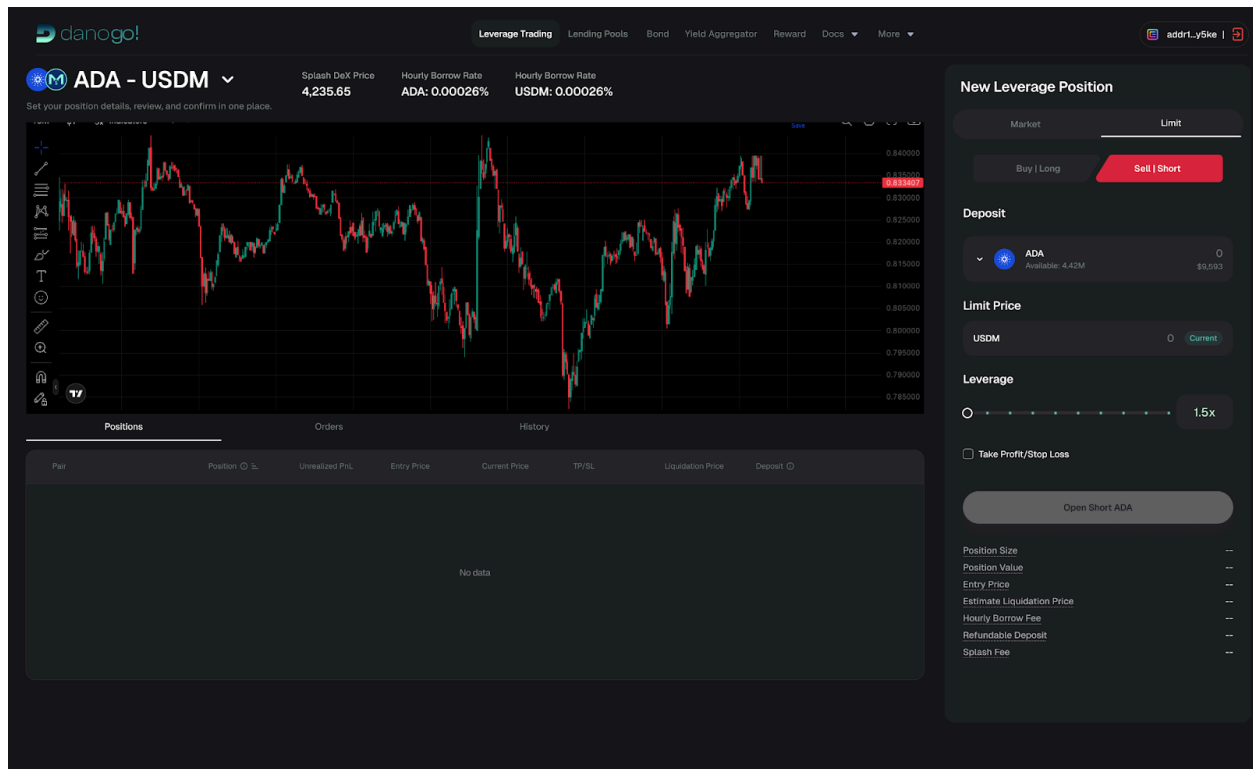

3. Once the order is placed, you can track it in the Orders tab. User can edit Order or Cancel Order
4. When the market reaches your specified price and the order is executed, your position will appear in the Positions tab.

8. Open Short Position (Limit Order with TP/SL) Flow

Open Short Position (Limit Order with TP/SL)

1. The flow for opening a Short position with a Limit Order and TP/SL follows the same steps as opening a Short position at market price, with key differences:
 - Instead of selecting "Market", the user selects "Limit" and sets a desired execution price.
 - Additionally, users can optionally set Take Profit and Stop Loss conditions.
2. All other steps remain the same:
 - Select trading pair
 - Select "Sell / Short"
 - Select deposit token, enter amount and leverage
 - Review position details
 - Submit transaction
3. The UI differences are as follows:
 - Additional input fields for:
 - Limit Price
 - Take Profit price
 - Stop Loss price

- The order is not executed immediately, but waits until the market reaches the specified limit price
- The order is created as a Pending Order, and the position is only opened once the limit condition is met
- TP/SL conditions are applied after the position is successfully opened
- Users can monitor, update, or cancel the pending order before execution

1. After selecting the trading pair and choosing Limit as the order type, make sure you are on the Short tab in the New Leverage Position section.

2. Enter your deposit amount and set your desired leverage.
3. **Then, specify your limit price—the price at which you want to open the position.**
4. User can also set your Take Profit and Stop Loss prices.
5. Review the position details shown below. If everything looks correct, click “Open Long” to place the limit order, then sign the transaction.

3. Once the order is placed, you can track it in the Orders tab. User can edit Order or Cancel Order

4. When the market reaches your specified price and the order is executed, your position will appear in the Positions tab.

9. Order & Position Monitoring

The monitoring section allows users to track all trading activities through three main tabs: Positions, Orders, and History.

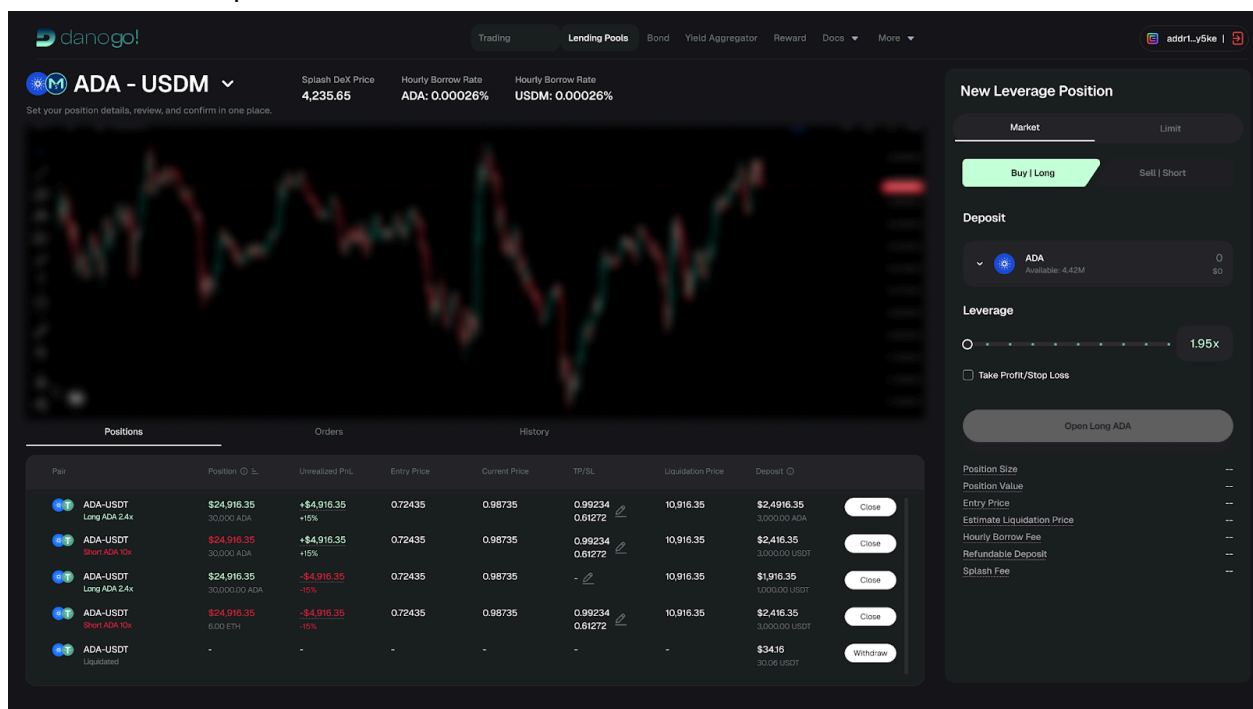

1. Positions Tab

- Displays all active positions opened by the user.
- Users can monitor key metrics, including:
 - Trading Pair
 - Side (Long / Short)
 - Leverage
 - Position Size
 - PnL (Profit & Loss)
 - Entry Price
 - Current Price
 - Take Profit / Stop Loss price (if set)
 - Liquidation Price
 - Deposit Amount
- Users can click “Close” to close a position at market price.

2. Orders Tab

- Displays all open and pending orders (e.g., Limit Orders).
- Users can track execution status and view details such as:

- Trading Pair
 - Side (Long / Short)
 - Leverage
 - Order Size
 - Open Limit Price
 - Take Profit / Stop Loss price (if set)
 - Deposit Amount
- Users can click “Cancel” to close an order
 - User can click “Edit” to edit the order
3. History Tab
- Displays all past actions and completed transactions.
 - You can see key details such as the Action Type, Trading Pair, Position Size, Deposit Amount, Price, and PnL.

1. Go to the Positions tab to view your active positions. You can see key details such as the Trading Pair, Leverage, Position Size, PnL, Entry Price, Current Price, Take Profit and Stop Loss, Liquidation Price, and Deposit Amount.
2. Click the Close button to close your position. A wallet signature popup will appear—sign the transaction to confirm.
3. Once the transaction is completed, the position will be closed and will no longer appear in the Positions tab.

2. Go to the Orders tab to track your open and pending orders. You can monitor their status and review key details such as the Trading Pair, Position Size, Order Price, Current Price, Take Profit and Stop Loss, and Deposit Amount.

3. Go to the History tab to review your past actions and transaction details. You can see key details such as the Action Type, Trading Pair, Position Size, Deposit Amount, Price, and PnL.

10. Edit Position

Users can update risk management settings for an active position through the Edit Position flow.

- Go to the Positions tab and click the edit icon in the Take Profit / Stop Loss column of the desired position.
- The Edit Position panel appears on the right side.
- Users can only update:
 - Take Profit price
 - Stop Loss price
- Other position parameters (e.g., leverage, position size, deposit) cannot be modified.
- After making changes:
 - Click “Change Position”
 - Confirm and sign the transaction in the wallet
- Once confirmed, the updated TP/SL settings are applied to the position.

12. PnL Popup (Unrealized PnL Details)

PnL Popup (Unrealized PnL Details)

1. Users can view detailed PnL information directly from the Positions tab.
 - Hover over the Unrealized PnL value to display the PnL popup with a detailed breakdown.
2. The popup includes:
 - Gross PnL
 - Calculated based on the total position size and the difference between entry price and current price
 - Excludes all fees
 - Accumulated Borrow Fee
 - The total cost of borrowing for the position
 - Includes fees incurred during opening and closing
 - Estimated Net PnL
 - The Estimated profit/loss after deducting all applicable fees
 - Users can hover over each item to view additional explanations.
 - PnL Color indicators:
 - Green: Profitable position
 - Red: Losing position

1. Go to the Positions tab to view the PnL of your position. Hover over the value in the Unrealized PnL column to see detailed information.
2. You can hover over each item to view more detailed information. Green indicates a profitable position

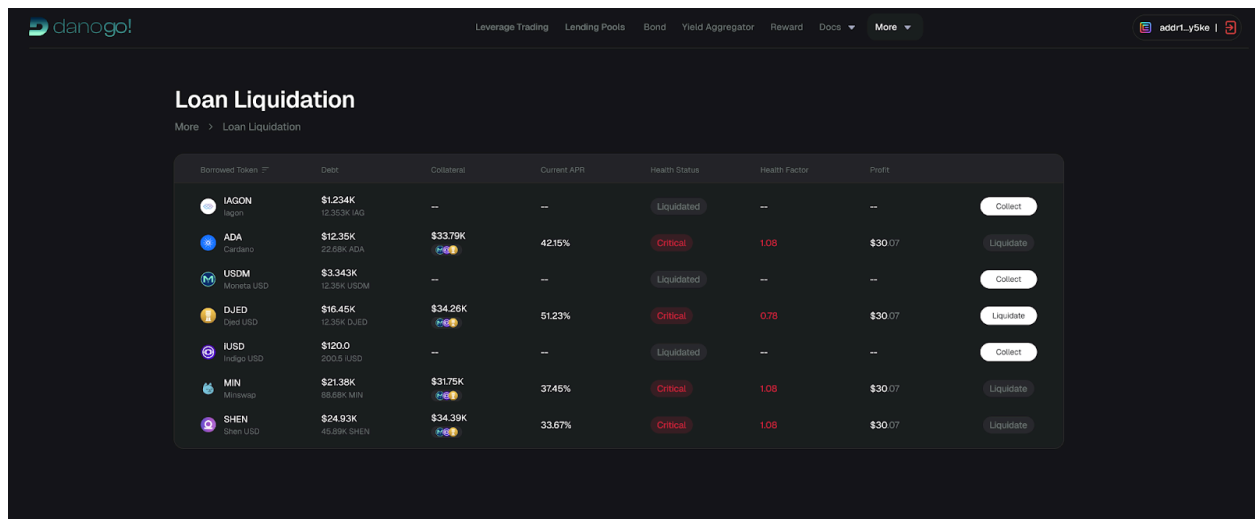

1. Go to the Positions tab to view the PnL of your position. Hover over the value in the Unrealized PnL column to see detailed information.
2. You can hover over each item to view more detailed information. Red indicates a profitable position

13. Loan Liquidation

Users can monitor and interact with liquidation opportunities through the Loan Liquidation flow.

1. On this screen, users can view:
 - Loans that have been liquidated
 - Loans that are at risk of liquidation
2. For each loan, users can perform the following actions:
 - Collect
 - Collect liquidated loans into the pool
 - Receive the collector reward
 - Requires signing the transaction
 - Liquidate
 - Trigger liquidation for eligible at-risk loans
 - Requires signing the transaction
