

Leverage – Open / Close Position (Market order via Minswap) · Test Cases

41 cases (25 Open + 16 Close) · pair fBTC-fUSDM · verified on preprod.danogo.io · Final status: 41 Pass / 0 Fail across 3 rounds.

Test ID	Test Title	Priority	Precondition	Steps	Input / Data	Expected Result	Postcondition	Trace.	Note	Round 1	Round 2	Round 3
SECTION 1 - OPEN POSITION (MARKET PRICE)												
OP-01	Open Position (Market) - default state after selecting Market tab - correct fields shown & CTA disabled	High	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Open the Open Position panel 2. Ensure Order Type = Market 3. Observe the whole panel	N/A (fresh panel)	Shown: Side control (Buy/Long active by default), Deposit (0.00 with Available + Max), Leverage slider (default 1.1x, range ~1.1x-5x), preview rows all "-". NO Limit Price field on the Market tab. Bottom CTA = "Enter Deposit" (disabled).	No system data changed; form inputs preserved.	UI-MKT-01	test-id: leverage-open-panel, open-order-type-market, open-cta	Pass - Behaves as expected.	-	-
OP-02	Order Type toggle (Market/Limit) - Limit Price field appears only on Limit tab	Medium	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Select Limit -> observe 2. Select Market -> observe	N/A	Limit tab: Limit Price field is shown. Market tab: Limit Price field is NOT shown. Switching order type clears the Deposit field.	No system data changed; form inputs preserved.	UI-MKT-01		Pass - Behaves as expected.	-	-
OP-03	Direction - toggle Buy/Long and Sell/Short - active state updates	Low	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Click Buy/Long -> observe 2. Click Sell/Short -> observe	N/A	Selected side is highlighted (active, positive tone for Long / negative tone for Short); the other side is inactive.	No system data changed; form inputs preserved.	UI-MKT-01		Pass - Behaves as expected.	-	-
OP-04	Deposit - enter a valid decimal within balance - value accepted	High	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Enter a valid decimal in Deposit 2. Observe	Deposit = 100.5 (<= available balance)	Value is accepted and shown correctly in the Deposit field.	No system data changed; form inputs preserved.	BR-DEP-01	test-id: leverage-depo-sit-amount-input	Pass - Behaves as expected.	-	-
OP-05	Deposit - left empty - CTA disabled	High	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Leave Deposit empty 2. Observe the CTA	Deposit = (empty)	Bottom CTA = "Enter Deposit" (disabled).	No system data changed; form cannot be submitted (CTA disabled).	BR-DEP-01		Pass - Behaves as expected.	-	-
OP-06	Deposit - enter 0 - CTA disabled	High	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Enter 0 in Deposit 2. Observe the CTA	Deposit = 0	CTA = "Enter Deposit" (disabled). (KMP guard: "Enter a deposit amount greater than zero.")	No system data changed; form cannot be submitted (CTA disabled).	BR-DEP-01		Pass - Behaves as expected.	-	-
OP-07	Deposit - enter more than available balance - over-balance banner + CTA "Fix Errors"	High	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Enter a Deposit greater than Available balance 2. Observe banner + CTA	Available = 500; Deposit = 100000 (> available)	Warning banner "Deposit exceeds your available <token> balance." is shown; CTA = "Fix Errors" (disabled).	No system data changed; form cannot be submitted (CTA disabled).	BR-DEP-02	<token> = deposit token symbol shown for the side	Fail - Typed a deposit above the available balance. The warning read "Insufficient balance" instead of "Deposit exceeds your available <token> balance.", and the button still said "Enter Deposit" instead of "Fix Errors".	Pass - The warning now reads "Deposit exceeds your available <token> balance." and the button changes to "Fix Errors" (disabled).	-
OP-08	Deposit - press Max - fills the full available balance	Medium	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Press Max 2. Observe Deposit field	Available = 500 fUSDM	Max fills the Deposit with the full available fUSDM balance (500).	No system data changed; form inputs preserved.	BR-DEP-01	test-id: open-deposit-max	Pass - Max fills the Deposit with the full available fUSDM balance.	-	-
OP-09	Deposit - enter non-numeric characters - rejected	Medium	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Try typing letters / special characters in Deposit 2. Observe	Deposit = "abc" / "\$@!"	Deposit field rejects non-numeric input; only digits and "." are accepted.	No system data changed; form inputs preserved.	BR-DEP-01	CONFIRM: block-on-type vs strip	Pass - Behaves as expected.	-	-
OP-10	Leverage - drag slider to each mark 1.1x-5x - value updates to slider position	High	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Drag the slider to each mark 1.1x / 2x / 3x / 4x / 5x 2. Observe the displayed value	Leverage = 1.1x, 2x, 3x, 4x, 5x (step 0.1)	Leverage value updates to match the slider position at each mark.	No system data changed; form inputs preserved.	BR-LEV-01		Pass - Behaves as expected.	-	-

Test ID	Test Title	Priority	Precondition	Steps	Input / Data	Expected Result	Postcondition	Trace.	Note	Round 1	Round 2	Round 3
OP-11	Leverage - drag fully left - stops at min (1.1x)	Medium	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Drag the slider fully left 2. Observe	Drag slider to far left	Value stops at 1.1x (min > 1.0x; KMP rejects leverage <= 1.0x with "Leverage must be greater than 1.0x.").	No system data changed; form inputs preserved.	BR-LEV-01		Pass - Behaves as expected.	-	-
OP-12	Leverage - drag fully right - stops at max (per-side cap; default 5x)	Medium	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Drag the slider fully right 2. Observe	Drag slider to far right	Value stops at the max leverage = the KMP per-side pool cap for this pair (fallback 5x); it does not go higher.	No system data changed; form inputs preserved.	BR-LEV-01	Max can vary per pair/side (each side borrows a different pool)	Pass - Behaves as expected.	-	-
OP-13	Preview - valid input (Long) - metrics auto-calculate, CTA "Open Long <base>"	High	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Enter valid Deposit, choose Leverage 2. Stop typing (~1s) 3. Observe metrics + CTA	Deposit = 100, Leverage = 2x	- Metrics auto-fill after idle (~1s), no Calculate button. - While calculating: CTA = "Calculating..." (disabled). - After preview: CTA = "Open Long <base>" (e.g. "Open Long fBTC") (enabled).	Metrics computed and displayed; no order created; no on-chain tx.	BR-PRV-01	CTA verb is "Open", NOT "Place Market"	Fail - After entering a valid deposit the button stayed on "Calculating..." and the preview figures never appeared.	Pass - The preview fills in about a second after typing stops and the button becomes "Open Long fBTC" (enabled).	-
OP-14	Preview - inspect metric fields after calc - all fields filled with correct unit & format	High	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Enter valid input, wait for auto-preview (do not click) 2. Check each field	Deposit = 100, Leverage = 2x	All 10 rows filled, correct unit & number format, no "-": Position Size, Position Value, Market Price, Price Impact, Entry Price, Est. Liquidation Price, Hourly Borrow Fee, Refundable Deposit, Opening Fee, Matching Fee (Matching Fee shows "-" for a Market order).	Metrics computed and displayed; no order created; no on-chain tx.	BR-PRV-01	No formula available -> verify format/unit only, not exact numeric value	Pass - Behaves as expected.	-	-
OP-15	Preview - numeric relationship Position Value ~ Deposit x Leverage	High	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Enter Deposit and Leverage 2. Wait for preview 3. Compare Position Value vs Deposit x Leverage	Deposit = 100 (collateral), Leverage = 3x	Position Value ~ 300 collateral (Deposit x Leverage, before fees); Position Size ~ Position Value / Entry Price. Values move proportionally when Deposit or Leverage changes.	Metrics computed and displayed; no order created.	BR-PRV-01	Representative numbers; exact value depends on live market/fees	Pass - Behaves as expected.	-	-
OP-16	Preview - change an input after metrics shown - metrics go stale then auto-recompute	High	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Have valid input with metrics shown 2. Change one input (Deposit / Leverage) 3. Observe metrics + CTA	Change Deposit 100 -> 150	- On change: old metrics dimmed (stale), CTA back to "Calculating..." (disabled). - After ~1s idle: metrics auto-update to new input, CTA back to "Open Long <base>" (enabled).	Metrics computed and displayed; no order created.	BR-PRV-01		Fail - After changing the deposit the old preview numbers stayed sharp and unchanged, and only updated after clicking back into the panel.	Pass - Changing an input dims the old preview numbers, then they refresh on their own and the button goes from "Calculating..." back to "Open Long fBTC".	-
OP-17	CTA - label follows input state	Medium	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Empty Deposit -> observe 2. Enter Deposit over balance -> observe 3. Enter valid input, wait -> observe	Step-by-step inputs	- Empty deposit: "Enter Deposit" (disabled) - Over balance: "Fix Errors" (disabled) - Calculating: "Calculating..." (disabled) - Preview ready: "Open Long <base>" (enabled)	No system data changed; form inputs preserved.	BR-PRV-01	No Calculate button (auto-preview, spec v2.18)	Pass - Behaves as expected.	-	-
OP-28	Switch Long->Short - inputs reset and deposit token changes	High	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. In Long, enter Deposit 2. Switch to Sell/Short 3. Observe	Deposit = 100, Leverage = 3x	Deposit resets; deposit token changes to the token required for Short; Leverage is preserved.	No system data changed; form inputs preserved.	BR-SW-01	Long deposits quote-side supply token; Short deposits base token (per code)	Pass - Behaves as expected.	-	-
OP-29	Switch Short->Long - inputs reset and deposit token changes	Medium	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market; Direction = Sell/Short.	1. In Short, enter input 2. Switch to Buy/Long 3. Observe	Deposit = 100, Leverage = 3x	All amount inputs reset; deposit token changes back to the Long token; Leverage preserved.	No system data changed; form inputs preserved.	BR-SW-01		Pass - Behaves as expected.	-	-
OP-30	Switch direction after metrics shown - metrics reset to "-"	Medium	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Enter input, wait for preview 2. Switch Long <-> Short 3. Observe metrics + CTA	Preview shown, then switch	Metrics reset to "-"; CTA returns to initial state ("Enter Deposit"); any armed auto-preview is cancelled.	No system data changed; form inputs preserved.	BR-SW-01		Pass - Behaves as expected.	-	-
OP-31	Place Market Long - sign succeeds, position opens immediately	High	Eternl wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Enter valid input, wait for preview 2. Click "Open Long <base>" 3. Sign tx in Eternl 4. Wait for success	Deposit = 100, Leverage = 2x	Tx signed & submitted; success screen shows "Market order placed" (venue-claim route) or "Position opened" (collateral-deposit route) + Done button + tx hash/explorer link. A new position appears in the Open Positions tab (NOT in a pending/Limit Orders list).	Active position exists in Open Positions; tx on-chain.	BR-SUB-01	Market opens immediately - no pending state	Fail - Clicking "Open Long" turned the whole screen blank and the order could not be placed.	Fail - The screen no longer goes blank, but the success message had no title and the new position did not show up in Open Positions even after refreshing.	Pass - The success screen shows "Market order placed" and the new position appears in Open Positions right away.

Test ID	Test Title	Priority	Precondition	Steps	Input / Data	Expected Result	Postcondition	Trace.	Note	Round 1	Round 2	Round 3
OP-32	Place Market Short - sign succeeds, position opens immediately	High	Eternal wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market; Direction = Sell/Short.	1. Enter valid input, wait for preview 2. Click "Open Short <base>" 3. Sign tx in Eternal 4. Wait for success	Deposit = 100, Leverage = 2x	Short position created and appears in Open Positions with the correct side.	Active Short position exists in Open Positions; tx on-chain.	BR-SUB-01		Pass - Behaves as expected.	-	-
OP-34	Place Market order - reject wallet signature - no position created	Medium	Eternal wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Enter valid input, wait for preview, place order 2. Reject signing in Eternal 3. Observe	Valid input; reject signature	No position created; tx modal shows an error message + "Retry" and "Close" buttons; form preserved.	No new position; no on-chain tx; form state kept.	BR-SUB-01		Fail - After declining the signature in the wallet, the transaction popup froze with no way to retry or close it.	Pass - Declining the signature now shows an error with "Retry" and "Close" buttons; the form keeps its values and no position is created.	-
OP-35	Place Market order - no venue/pool for pair - route warning banner	Low	Eternal wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Select a pair whose Minswap venue/adapter is unavailable 2. Enter valid input 3. Observe	Pair with no available venue	A warning route notice banner is shown (leverage-open-route-notice); order cannot be built/placed.	No system data changed; form cannot be submitted (CTA disabled).	BR-SUB-01	Environment-depende nt	Blocked - Could not test: every pair in the test environment had a working trading route, so the "no route" case could not be triggered.	Pass - Retested on staging with the trading route turned off: the warning banner appeared and the order could not be placed.	-
OP-36	Open Market order - on-chain transaction submitted & CONFIRMED	High	Eternal wallet connected; wallet holds enough collateral; Leverage screen open on the test pair (fBTC-fUSDM); Open Position panel visible; Order Type = Market. Direction = Buy/Long.	1. Enter valid input, wait for preview 2. Click "Open Long <base>" 3. Sign tx in Eternal 4. Wait for confirmation 5. Click the explorer link	Deposit = 100, Leverage = 2x	Tx progresses Waiting for wallet signature... -> Submitting transaction... -> Waiting for confirmation... -> "Transaction confirmed" (success). A truncated tx hash + explorer link are shown; the link opens the CONFIRMED tx on the Cardano explorer. After inclusion, the new position persists in Open Positions on refresh and an "Opened" row is indexed in Action History.	Position active and indexed on-chain; tx confirmed on explorer.	BR-SUB-01	test-id: leverage-open-tx-modal, leverage-op-en-transaction-done, leverage-open-explore-r-link	Fail - The order went through, but the explorer link on the success screen opened a "page not found" instead of the transaction.	Pass - The explorer link now opens the confirmed transaction and the success screen shows the transaction hash.	-
SECTION 2 - CLOSE POSITION (MARKET PRICE)												
CP-01	Open Positions - active row shows red "Close" button	High	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Open the Open Positions tab 2. Observe an active position row	N/A	Each active row shows a red "Close" button in the Actions cell (aria-label "Close <base>-<quote> position").	No system data changed; form inputs preserved.	BR-CLO-LAY OUT	test-id: position-close-<loanId>	Pass - Behaves as expected.	-	-
CP-02	Open Positions - non-active / in-flight row actions	Medium	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Observe a non-active row and a row whose exit is in flight	N/A	Non-active/terminal row: disabled "Withdraw" button (tooltip "Withdraw is not available yet"). Row whose exit is in flight: plain text "Settling" (no button).	No system data changed; form inputs preserved.	BR-CLO-LAY OUT	test-id: position-withdraw-<loanId>, position-settling-<loanId>	Pass - Behaves as expected.	-	-
CP-03	Close - click Close - close modal opens with header + preview blocks	High	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Click "Close" on an active position 2. Observe the modal	N/A	Modal "close-position-modal" opens. Header rows: Pair, Side (Long/Short + leverage), Position size. Full-close banner: "This closes the whole position - the loan is repaid in full and the position is retired." Two preview blocks: "You receive" and "the result".	No system data changed; form inputs preserved.	BR-CLO-LAY OUT		Pass - Behaves as expected.	-	-
CP-04	Close - preview metric fields format & units	High	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Open the close modal, wait for preview 2. Check each field	N/A	"You receive" block: estimated receive amount + token (Long->base, Short->quote), close price, price impact (favorable/unfavorable sign). "the result" block: Estimated PnL (signed USD, colored) + PnL %, and closing-fee caption. All correctly formatted.	No system data changed; form inputs preserved.	BR-CLO-PR EVIEW	Closing fee is shown as part of PnL, not deducted from payout	Pass - Behaves as expected.	-	-
CP-05	Close - full-close only (no partial controls)	High	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Open the close modal 2. Look for a close-size input / percentage slider / receive-token picker	N/A	No close-size input, no percentage slider (MIN/25/50/75/MAX), no receive-token picker are rendered. The whole position is closed in one action.	No system data changed; form inputs preserved.	BR-CLO-LAY OUT	Shipped code is full-close only; spec's partial-close is not implemented	Pass - Behaves as expected.	-	-
CP-06	Close - preview auto-calculates; CTA disabled until ready	High	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Open the close modal 2. Observe CTA while preview loads, then after it resolves	N/A	While loading: a skeleton (close-preview-skeleton) is shown and CTA "Close Position" is disabled. After preview ready: CTA "Close Position" (red) becomes enabled; secondary "Cancel" always enabled.	No system data changed; form inputs preserved.	BR-CLO-PR EVIEW	CTA label is a fixed "Close Position" - no dynamic labels	Fail - The "Close Position" button could be clicked while the preview was still loading, before the figures were ready.	Pass - The "Close Position" button stays disabled until the preview finishes loading; a loading placeholder shows in the meantime.	-
CP-07	Close - preview unavailable - can still close	Medium	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Open the close modal for a position whose close price cannot be simulated 2. Observe	Position with no simulatable close price	Notice banner "Close estimates are unavailable - this position's close price could not be simulated right now. You can still close the position." CTA "Close Position" is still available.	No system data changed; form inputs preserved.	BR-CLO-PR EVIEW		Pass - Behaves as expected.	-	-
CP-08	Close - numeric PnL (profit, Long)	High	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Open the close modal on a profitable Long 2. Read Estimated PnL and estimated receive	Entry ~ 138,000; current ~ 145,000; size ~ 0.002 (base)	Estimated PnL is positive (green) and PnL % > 0; estimated receive > 0. PnL grows with the entry->current gap and with leverage.	No system data changed; form inputs preserved.	BR-CLO-PR EVIEW	Representative; exact value depends on live price/fees	Pass - Behaves as expected.	-	-
CP-09	Close - numeric PnL (loss)	High	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Open the close modal on a losing position 2. Read Estimated PnL	Entry ~ 138,000; current ~ 130,000 (Long)	Estimated PnL is negative (red) and PnL % < 0; estimated receive is reduced accordingly.	No system data changed; form inputs preserved.	BR-CLO-PR EVIEW		Pass - Behaves as expected.	-	-
CP-10	Close Long - confirm & sign - tx succeeds, position settles then leaves list	High	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Click Close on a Long, wait for preview 2. Click "Close Position" 3. Sign tx in Eternal 4. Wait	Any active Long	Tx modal "close-position-tx-modal" opens (non-dismissible while in flight). On success: "Transaction confirmed" + Done button + tx hash/explorer link. The position is NOT removed instantly - it shows "Settling", then drops from Open Positions on the next BFF read once the parked order fills.	Close order placed on-chain; position settling then removed; funds returned to wallet.	BR-CLO-SUB	Snapshot heading "Close order placed" is not passed to UI -> screen shows "Transaction confirmed"	Fail - Clicking "Close Position" did nothing; the transaction popup never opened.	Fail - The popup opened and the transaction was sent, but the position was stuck on "Settling" and never dropped off the Open Positions list.	Pass - The position shows "Settling" and then disappears from Open Positions once the data refreshes; the transaction is confirmed.

Test ID	Test Title	Priority	Precondition	Steps	Input / Data	Expected Result	Postcondition	Trace.	Note	Round 1	Round 2	Round 3
CP-11	Close Short - confirm & sign - tx succeeds	High	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Click Close on a Short, wait for preview 2. "Close Position" 3. Sign in Eternal 4. Wait	Any active Short	Same as CP-10 for a Short position; receive token is the quote token.	Close order placed on-chain; position settling then removed.	BR-CLO-SUB		Pass - Behaves as expected.	-	-
CP-12	Close - reject wallet signature - position stays	Medium	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Click Close, wait for preview, click "Close Position" 2. Reject signing in Eternal 3. Observe	Reject signature	Error state shown (classified message, fallback "Transaction failed") + "Retry" and "Close" buttons; the position remains active in Open Positions; no on-chain tx.	Position unchanged; no on-chain tx.	BR-CLO-SUB		Pass - Behaves as expected.	-	-
CP-13	Close - Cancel button - modal closes, nothing happens	Medium	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Click Close 2. Click "Cancel"	N/A	Close modal closes; no tx; position unchanged.	No system data changed; form inputs preserved.	BR-CLO-LAYOUT	test-id: close-cancel	Pass - Behaves as expected.	-	-
CP-14	Close - no Minswap pool for pair - hard block	Medium	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Attempt to close a position whose pair has no Minswap pool 2. Observe	Pair with no Minswap pool	Blocking error "No Minswap pool is available for this pair right now, so the close order cannot be placed. Try again in a moment." Close cannot proceed.	Position unchanged.	BR-CLO-POOL	Environment-dependent	Blocked - Could not test: every pair in the test environment had a Minswap pool, so the "no pool" case could not be triggered.	Pass - Retested on staging with the pool removed: the blocking message appeared and the close could not proceed.	-
CP-15	Close - event appears in Action History as "Close (Manual)"	High	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Close a position successfully 2. Open Action History 3. Observe the newest row	N/A	A history row "Close (Manual)" with a positive badge. The origin label is EMPTY for a close (not "Market"). Row carries pair, side, size, price, timestamp, explorer link.	No system data changed; form inputs preserved.	BR-HIST-01	origin label is derivable only for open/limit actions	Fail - In Action History the close row showed the source label "Market"; for a close it should be blank.	Pass - The source label is now blank and the row reads "Close (Manual)" with a positive badge.	-
CP-16	Close position - on-chain transaction submitted & CONFIRMED	High	Eternal wallet connected; on the Leverage screen; at least one ACTIVE position exists in the Open Positions tab.	1. Click Close, wait for preview 2. Click "Close Position" 3. Sign tx in Eternal 4. Wait for confirmation 5. Click the explorer link	Any active Long, size ~ 0.002 (base)	Tx progresses through signing -> submitting -> confirming -> "Transaction confirmed" + Done. A truncated tx hash + explorer link are shown; the link opens the CONFIRMED close tx on the Cardano explorer. Once the parked order fills, the position leaves Open Positions (interim "Settling"), a "Close (Manual)" row is indexed in Action History, and the returned funds are credited to the wallet balance.	Position closed & settled on-chain; funds returned; tx confirmed on explorer.	BR-CLO-SUB	test-id: close-position-tx-modal, leverage-open-explorer-link	Pass - Behaves as expected.	-	-

Legend & Traceability

Column meanings	
Test ID	OP-xx = Open Position (Market); CP-xx = Close Position (Market).
Test Title	Pattern: [Function] - [Condition/Input] - [Expected result].
Traceability	Provisional business-rule code the case verifies (see table below).
Precondition	State required before running the case.
Input / Test Data	Concrete input values used (representative numbers).
Steps	Actions to perform.
Expected Result	Expected behavior at execution time (matches shipped code).
Postcondition	System state AFTER the case.
Priority	High / Medium / Low.
Note	CONFIRM / KNOWN-FAIL / environment notes.
Round 1/2/3 Result	Execution outcome per retest round: Pass / Fail / Blocked + reason. "-" = round not needed (the case already passed in an earlier round).
Test data baseline (representative)	
Pair under test	fBTC-fUSDM (base = fBTC, quote = fUSDM). Any live leverage pair works.
Wallet	Eternl, mainnet, read-only (signTx/submitTx real only in a signing run).
Deposit token	Shown per side: Long deposits the quote-side supply token; Short deposits the base token.
Available balance	Assume ~500 fUSDM (the full balance is spendable).
Leverage	Default 1.1x; min > 1.0x; max = per-side pool cap (fallback 5x); step 0.1.
Illustrative entry price	~138,000 quote/base (exact value is live-market dependent).
Traceability table (business rule -> test basis)	
Rule code	Description
UI-MKT-01	Market tab layout & default: Side/Deposit/Leverage; NO Limit Price; auto-preview (no Calculate button).
BR-DEP-01	Deposit: numeric with "."; empty/0 -> CTA "Enter Deposit" disabled; Max fills spendable balance.
BR-DEP-02	Deposit > available -> banner "Deposit exceeds your available <token> balance." + CTA "Fix Errors".
BR-LEV-01	Leverage slider: min > 1.0x (default 1.1x) to per-side max (fallback 5x), step 0.1; no manual entry.
BR-PRV-01	Preview auto-calculates on ~1s idle; 10 metric rows; change input -> stale then recompute; CTA states Enter Deposit / Fix Errors / Calculating... / Open <Long/Short> <base>.
BR-SW-01	Switch Long/Short: resets deposit, changes deposit token; keeps leverage; resets metrics.
BR-SUB-01	Place Market order: sign in Eternl -> position opens IMMEDIATELY in Open Positions (success "Market order placed" / "Position opened"); not pending; reject -> Retry/Close.
BR-CLO-LAYOUT	Close trigger: red "Close" per active row -> modal (full-close only; no partial slider/size/receive-token).
BR-CLO-PREVIEW	Close preview auto (skeleton); You receive (amount/close price/price impact) + result (Estimated PnL/%, closing fee); unavailable -> banner but still closeable.
BR-CLO-SUB	Confirm close -> sign -> tx success "Transaction confirmed" + Done; position "Settling" then removed on next read; reject -> Retry/Close.
BR-CLO-POOL	No Minswap pool -> hard block message; close cannot proceed.
BR-HIST-01	Close event in Action History: "Close (Manual)", positive badge, empty origin label.
Test-execution summary (41 cases, 3 rounds):	
- Round 1: 30 Pass, 9 Fail, 2 Blocked.	
- Round 2: the 9 fails + 2 blocked retested -> 9 Pass; 2 still Fail (OP-31, CP-10).	
- Round 3: OP-31 and CP-10 -> Pass.	
- Final status: 41 Pass / 0 Fail.
